Yanzi showcased at the 12th European Conference on Wireless Sensor Networks

A team from Yanzi showcased at the 12th European Conference on Wireless Sensor Networks in Porto. We demonstrated how Yanzi uses the Contiki OS, an Operating System specially designed for the Internet of Things, and the Elliptic Curve Cryptography solution that the Yanzi Things use to establish a secure and private connection to the Yanzi Gateway.

About the EWSN

The International Conference on Embedded Wireless Systems and Networks is a highly selective, annual forum for presenting research results in the field of networked embedded systems, broadly defined, including for example Wireless Sensor Networks, Internet of Things, or Cyber-Physical Systems. Please visit www.ewsn.org for more information.

About Yanzi

Yanzi delivers an end-to-end, horizontal, and all-IP software IoT platform. The company offers sensors, gateways, and a cloud server system packaged into a Software as a Service solution for Smart Home and Smart Office applications. The horizontal and all-IP approach provides a solution that is easy, smart, and evolutionary. Yanzi Networks is a venture backed company with headquarters in Kista, Sweden. The company was founded in 2009. www.yanzi.se
